Energy Isolation Valves

Features:

- Lockable only in the off position (downstream air exhausted)
- Bright yellow body for easy identification
- Large range of port sizes available (1/4" 2")
- Available in 316 stainless steel

Automatic Valve carries a complete line of energy isolation valves, commonly known as "Lockout" valves. Typically, Lockout valves are the first valve in an air line that supplies compressed air to equipment. When the highly visible red handle is depressed, upstream air is isolated from the equipment. At the same time, downstream air is exhausted through the valve. The valve can be locked through the handle, to prevent inadvertent actuation.
