World Class Pneumatic Solutions

INTRODUCING...

Stainless Steel Accessories

INDUSTRIES: Food Processing ▪ Process Control

APPLICATION DESCRIPTION: Customer produces food processing equipment specifically for the cheese industry.

PROBLEM: The application is in a caustic environment and requires stainless steel valves and mufflers. The distributor can provide AV stainless steel products, including control valves, lockout valves and air preparation units, but not the accessories.

SOLUTION: Automatic Valve solved the problem by adding a complete line of stainless steel accessories, which includes mufflers and speed control mufflers. These stainless steel accessories are available in 1/8" through 1" pipe sizes. AV distributors can now offer their customers a complete stainless steel control package solution.

Contact the factory or your local distributor for more information.
